

Telescopic Lighting Pole

Telescopic Lighting poles remove the hazards of working at heights by bringing the fixture to the worker and not the worker to the fixture. Pictured with Union Range Single Lens: <http://www.led.co.uk/products/union-range/union-single-lens/>

The wide range of pole and fixture mounting accessories make installation simple and our clients enjoy installation cost savings of 30-40% over traditional non-lowering lighting columns.

By installing this product during routine maintenance, immediate savings of over 50% can be realised and future maintenance costs are dramatically cut by over 90%.

Raising and lowering is as simple as loosening a single bolt. Our spring assisted lighting pole can be raised as high as 3 metres and lowered to 1.5 metres, making the installation and maintenance of any pole mounted product safer and more cost effective.

Don't let your lighting deteriorate to dangerous levels, improve safety and maintenance with LED.CO.UK.

Available options
